THE $900K/YEAR GAP

A 10-seat institutional desk running Bloomberg ($320K) + FactSet ($120K) + AlphaSense ($150K) + Capital IQ ($100K) + RavenPack ($100K) spends approximately $790K–$900K

per year on financial data and intelligence tools.

That stack gives them: real-time prices, news, messaging, fundamentals, static supply chain data, document search, and entity-level sentiment.

What it does *not* give them: dynamic weighted relationship edges, automated event propagation scoring, multi-hop contagion traversal, temporal graph rewind, canary company identification, relationship decay detection, or a full signal explainability chain.

That is the gap. That is MKG.
