MARKET KNOWLEDGE GRAPH SYSTEM

Market Intelligence Report

ISSUE 001 · PRE-IMPLEMENTATION EDITION · CONFIDENTIAL

February 2026
Research Edition

The *$35 billion market* with a structural blind spot

> *Institutional investors spend extraordinary sums on financial data yet cannot answer the most fundamental question in markets: when a shock hits Company X, which other companies does it travel to, by how much, and why?*

RESEARCH · COMPETITIVE INTELLIGENCE · GAP ANALYSIS · STRATEGIC POSITIONING

$35B
ANNUAL SPEND
Global institutional financial data spend — without relationship intelligence

63%
CAGR 2025-30
Alternative data market growth rate — fastest of any segment

$32K
PER SEAT / YEAR
Bloomberg Terminal 2025 price — still no graph intelligence included

0
COMPETITORS
Commercial systems combining dynamic graph weights + neural WAN + on-prem

01 MARKET LANDSCAPE — SIZE & SEGMENTS

The financial data and analytics market spans multiple overlapping segments. MKG operates at the intersection of three of them: the traditional financial data infrastructure (Bloomberg, FactSet), the AI market intelligence layer (AlphaSense, RavenPack), and the fast-growing knowledge graph technology vertical. Each segment is large, each is growing, and **none has solved the problem MKG addresses**.

TRADITIONAL FINANCIAL DATA
$35B
↑ ~8% CAGR
Bloomberg, Refinitiv, FactSet. Stable incumbents, slow growth, zero relationship intelligence.

ALTERNATIVE DATA
$11.65B

The alternative data market — the segment most relevant to MKG's signal output — **is the fastest-growing segment in financial services**. From $11.65B in 2024, it is projected to reach $135B by 2030 at a 63% CAGR, driven almost entirely by hedge funds seeking alpha signals that traditional data cannot provide. Hedge fund operators account for 68–71% of all alternative data spending.

> *"More than 60% of buy-side respondents currently use alternative data; 54% use it extensively. The average large fund subscribes to 43 separate datasets, spending $1.6M per year."*

The knowledge graph market itself — MKG's core architectural technology — is growing at 37% CAGR and financial services (BFSI) is already its largest vertical. **By 2025, 60% of financial institutions are expected to adopt graph analytics as their core fraud detection technology** — a proof point that the graph paradigm has institutional legitimacy, even if no one has yet applied it to alpha generation with neural-network-adjusted weights.

↑ 63% CAGR → $135B by 2030

Fastest-growing segment. Hedge funds dominate 68% of spend. MKG's output competes here.

MARKET INTELLIGENCE (AI)

~$8B

↑ ~16% CAGR

AlphaSense ($500M ARR), RavenPack. Document search, not graph traversal.

KNOWLEDGE GRAPH TECH

$1.1B

↑ 37% CAGR → $6.9B by 2030

MKG's core architectural technology. BFSI is largest vertical. Proven at scale for fraud/compliance.

SUPPLY CHAIN RISK MGMT

$4.52B

↑ 15.3% CAGR → $9.2B by 2030

Resilinc, Interos ($1B valuation), Everstream. Supply chain graphs — but for operations, not investing.

MKG'S ADDRESSABLE MARKET

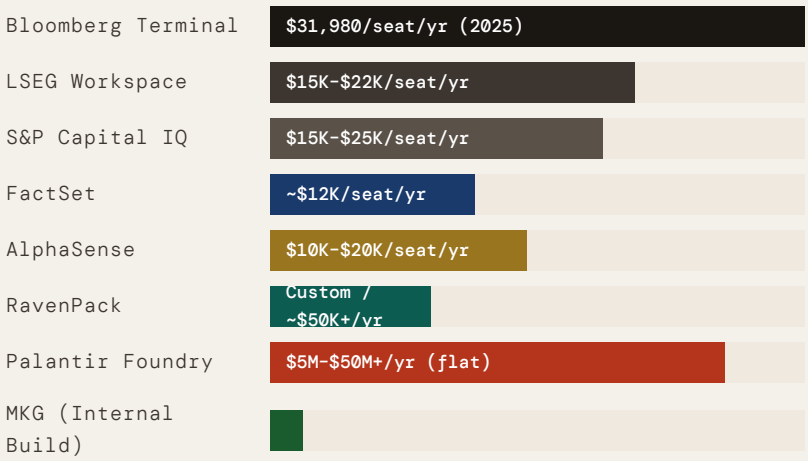
$15B+

↑ Intersection of all five above

Relationship intelligence for alpha generation. Currently unaddressed by any commercial system.

02 PRICING LANDSCAPE — WHAT INSTITUTIONS ALREADY PAY

Understanding what institutional desks already pay is critical context. A 10-person buy-side team running Bloomberg + FactSet + AlphaSense is already spending **$500K–$900K per year** on data infrastructure — and still lacks any relationship intelligence capability. MKG does not add another line to the budget; it fills the gap that the existing spend leaves open.



THE DESK BUDGET CALCULATION

A 10-seat hedge fund team: Bloomberg (×10) = $280K + FactSet (×10) = $120K + AlphaSense (×5) = $75K + RavenPack = $50K+ = $525K–$900K/yr before any alternative data subscriptions. None of this buys relationship graph intelligence. MKG adds that layer at engineering cost, not per-seat cost.

BLOOMBERG PRICE HISTORY

2022: $24,000/yr → 2023: +9.6% → 2025: $31,980/yr (single terminal). Multi-terminal: $28,320/yr. Price increases tied to global inflation. 2-year mandatory lease. ~320,000 terminals globally. Each increase = captive revenue.

ALPHASENSE REVENUE TRAJECTORY

2019: $8.6M ARR → 2022: $111.6M → 2024: $200M → 2025: $500M ARR. Valuation: $4B (Jun 2024). Total funding: $1.4B. Acquired Tegus for $930M (2024). Serves 88% of S&P 100, 75% of top hedge funds. IPO track.

KEY PRICING INSIGHT

At 2025 prices, Bloomberg alone costs more than hiring a mid-level analyst. The terminal is equivalent to 37% of an average analyst's salary. Yet funds pay it — because the data is irreplaceable. MKG targets the irreplaceable layer Bloomberg doesn't cover.

ALTERNATIVE DATA SPEND

Large funds average $1.6M/yr on alternative data, subscribing to 43 datasets. 95% plan to maintain or

increase budgets. 62% cite price as primary barrier — yet churn is minimal. Budget is available; the right product is not.

03 COMPETITOR PROFILES — TIER BY TIER

TIER 1 — INCUMBENT DATA PLATFORMS (EXISTING DESK INFRASTRUCTURE)

Bloomberg
TIER 1
Terminal

$31,980

Per seat / year (2025)

Global standard for real-time data, news, execution, and messaging. Irreplaceable network effects. ~320,000 terminals deployed globally. Zero relationship graph capability.

Real-time data | News | Execution | No graph | No propagation | Cloud only

LSEG
TIER 1
Workspace (Refinitiv)

$15K–22K

Per seat / year

Bloomberg's closest rival. Reuters news, StarMine analytics, CodeBook Python interface. Stronger developer API ecosystem. Better FX/fixed income depth. Same fundamental blind spot: no relationship graph.

Reuters news | Developer API | ~Entity data | No graph | Cloud only

S&P Capital IQ
TIER 1
+ FactSet

$12K–25K

Per seat / year (combined)

Capital IQ has the closest thing to a static relationship graph — executive and board network mapping. FactSet excels in fundamentals and quant data feeds. Together: deep individual company data, no dynamic weights, no propagation.

Fundamentals | ~Static graph | Board network | No dynamic weights | No signals

TIER 2 — AI & NEWS INTELLIGENCE PLATFORMS (CLOSEST FUNCTIONAL NEIGHBORS)

AlphaSense
TIER 2
$4B valuation · $500M ARR

$10K–20K

RavenPack
TIER 2
+ Bigdata.com (2024)

Custom

Palantir
TIER 2
Foundry / Metropolis

$5M–50M+

Per seat / year

AI-powered document search across 500M+ docs: SEC filings, earnings calls, expert transcripts (Tegus: 240K+). Serves 88% of S&P 100, 75% of top hedge funds. Grew from $8.6M (2019) to $500M ARR (2025). Fundamentally a search engine, not a graph.

Document search
Expert calls
Sentiment
No graph
No propagation
Cloud only

Enterprise / quant fund pricing

The most sophisticated news-to-signal platform. 40K+ sources in 13 languages, 80+ fields per entity, 20+ sentiment indicators. 70% of top quant hedge funds use it. Just launched Bigdata.com agentic AI. Recently partnered with FT (Dec 2025). No graph architecture, no dynamic edge weights.

News analytics
13 languages
Sentiment scores
~Entity mapping
No graph weights

Per year (flat enterprise)

The general-purpose enterprise data platform. On-premise available. Ontology-based data model has conceptual similarity to a knowledge graph. Used by some large hedge funds via Metropolis product. Priced out of most institutions. Requires 20+ person engineering team to configure.

On-premise
Data integration
~Ontology
Not purpose-built
Prohibitive cost

TIER 3 — SUPPLY CHAIN INTELLIGENCE (SAME GRAPH IDEA, DIFFERENT PURPOSE)

Interos.ai

TIER 3

$1B valuation · $45.6M Series D (2024)

Custom

Enterprise SaaS

AI-driven multi-tier supply chain mapping and risk monitoring. Maps supplier ecosystems as a living global graph — 80,000+ risk-related datasets, continuous updates, AI risk scoring across 6 categories. Built for procurement/operations, not investing. No trading signal output.

Multi-tier graph
AI risk scoring
Continuous updates
Not for investors

Resilinc

TIER 3

Gartner Magic Quadrant Leader 2025

Custom

Enterprise SaaS

Multi-tier supply chain mapping with geocoded supplier sites, AI event monitoring (EventWatch AI), disruption simulations, and agentic AI mitigation playbooks. Gartner Leader 2025. Purpose-built for supply chain operations — not financial signal generation. No edge weight time-series.

Multi-tier mapping
Event monitoring
Agentic AI
Operations only
No investor output

FinDKG

TIER 3

Open source · Academic only

Free

Non-commercial research only

The architecturally closest system to MKG's vision. Dynamic knowledge graph from financial news, powered by KGTransformer (attention-based GNN). Temporal link prediction for trend detection. English only, no enterprise features, no scraping agent, no explainability dashboard. Proof of concept.

Dynamic KG
GNN model
~Temporal
Non-commercial
Not deployable

No alpha signals

04 HEAD-TO-HEAD FEATURE MATRIX

Reading the matrix: ✓ **full capability** ~ **partial** ✗ **absent**. The final column shows MKG's target state. No single competitor delivers more than 3–4 of these capabilities simultaneously.

Capability	Bloomberg	LSEG	FactSet	Capital IQ	AlphaSense	RavenPack
Real-time market data	✓	✓	~	✗	~	~
News ingestion (6+ languages)	~	~	✗	✗	✗	✓
Entity extraction from news	~	~	✗	~	✓	✓
Static relationship graph	✗	✗	✗	✓	✗	✗
Dynamic edge weights	✗	✗	✗	✗	✗	✗
Neural net weight adjustment	✗	✗	✗	✗	✗	✗
Event impact propagation	✗	✗	✗	✗	✗	✗
Impact score + direction + decay	✗	✗	✗	✗	✗	✗
Temporal graph rewind	✗	✗	✗	✗	✗	✗
Edge weight time-series history	✗	✗	✗	✗	✗	✗
Backtest harness	~	~	~	✗	✗	✓
Full signal explainability	✗	✗	✗	✗	~	✗
Source data lineage per signal	✗	✗	✗	✗	~	~
On-premise deployment	✗	✗	✗	✗	✗	✗
Multi-horizon (1h / 1d / 1w / 1mo)	~	~	~	✗	~	✓
Alpha generation (purpose-built)	✗	✗	~	✗	~	✓

FEATURE MATRIX — ✓ FULL · ~ PARTIAL · ✗ ABSENT — MKG TARGET STATE SHOWN IN FINAL COLUMN

05 WHERE THE POWER IS — WHAT COMPETITORS DO WELL

Competitive research demands honesty about what rivals do well. Each of these platforms has real strengths that MKG must understand — not to replicate, but to position against and, where appropriate, to complement with.

Bloomberg's Moat

- ⚡ Irreplaceable network effects — being on Bloomberg means being in the network. IB messaging alone retains users.
- ⚡ Depth and breadth of real-time data is unmatched — every asset class, every market, every major exchange.
- ⚡ ~320,000 terminal lock-in. 2-year mandatory leases. 6.5% annual price increases — inflation-linked pricing power.
- ⚡ Decades of institutional habit. Moving off Bloomberg requires deliberate change management.

AlphaSense's Moat

- ⚡ 500M+ proprietary documents — the corpus itself is the moat. Tegus acquisition ($930M) added 240K expert transcripts.
- ⚡ Network effects from 6,500+ enterprise customers including 88% of S&P 100 and 75% of top hedge funds.
- ⚡ Smart Synonyms + Generative Search genuinely save analyst time. Workflow integration creates daily habit.
- ⚡ Proprietary content = defensible training data for AI models. This compounds over time.

RavenPack's Moat

- ⚡ 22 years of financial NLP data (founded 2003). The historical sentiment dataset is irreproducible.
- ⚡ 40,000+ sources in 13 languages. Breadth of news coverage is industry-leading.
- ⚡ 70% of top quant hedge funds use it — deeply embedded in quant model pipelines. Hard to displace.
- ⚡ FT partnership (Dec 2025) adds premium licensed content + credibility for institutional AI use.

Interos / Resilinc's Moat

- ⚡ Supply chain graphs that actually work at multi-tier scale — proven at Tier 3 and Tier 4 suppliers.

FinDKG / Academic Edge

- ⚡ KGTransformer architecture is peer-reviewed, open-source, and demonstrably better than static graph methods for

Capital IQ's Moat

- ⚡ Largest database of private company data globally — irreplaceable for understanding private market relationships.

- ⚡ Supplier-verified data (Resilinc) is more accurate than scraped data. Ground truth moat.
- ⚡ Interos: $1B valuation, $204M total capital — scale and institutional backing for enterprise sales.
- ⚡ Gartner Leadership (Resilinc 2025) — regulatory and procurement decision-makers trust the brand.

financial thematic investing.

- ⚡ Proves the concept is valid — temporal link prediction from financial news is a working approach.
- ⚡ Can be studied, adapted, and built upon for MKG's WAN — it is a blueprint, not just a competitor.

- ⚡ Executive and board network mapping is the closest existing thing to a financial relationship graph — static but rich.
- ⚡ M&A transaction history is best-in-class — critical for understanding acquisition-driven relationship changes.

06 THE GAPS — WHAT THE MARKET CONSISTENTLY FAILS TO PROVIDE

These are not minor omissions — they are structural blind spots shared by every commercial platform. Each gap has remained unfilled despite hundreds of millions of dollars in R&D across the industry. The reason is not capability but focus: incumbents optimise for the use cases that generated their initial revenue, not for the new use case that their data structure cannot serve.

01 Dynamic, Neural-Network-Adjusted Edge Weights

Every platform treats relationships as binary or static. Capital IQ shows you the TSMC–NVIDIA supply chain relationship. It does not tell you that the weight of that relationship — the strength of the dependency risk — changed the moment TSMC reported a 12% earnings miss. No commercial system continuously updates relationship strength from news signals through a neural network.

CURRENT STATE: Relationships are database entries. Either connected or not. Weight is implicit and static.

MKG SOLUTION: Weight Adjustment Network (WAN) — reads signals, outputs weight deltas, continuously updates the graph in real time.

All Tier 1 | All Tier 2 | ~FinDKG (academic only)

02 Automated Multi-Hop Contagion with Quantified Output

AlphaSense finds documents about connected companies. That is manual and reactive. No system takes a news event and automatically traverses a weighted graph to score every reachable entity — with impact score (0–100), direction (±), confidence, and time decay curve — in under 60 seconds. This automated propagation is the core alpha mechanism, and it does not exist commercially.

CURRENT STATE: Analysts manually research second-order effects. Hours or days after the event.

MKG SOLUTION: Event trigger → graph traversal → ranked impact list for every reachable entity in <60 seconds.

All 9 competitors ~Interos (operational, not investing)

03

Full Temporal Graph State — Rewind to Any Timestamp

Bloomberg stores historical prices. AlphaSense stores historical documents. But no platform stores the full state of a relationship graph — structure and weights — at every point in time, queryable to any millisecond. Without this, backtesting is fundamentally flawed: you cannot replay what the model would have known at historical timestamp T without temporal graph state. This also makes event replay (SVB collapse, COVID crash) impossible at the graph level.

CURRENT STATE: Historical data exists for prices and documents. No temporal graph state history exists commercially.

MKG SOLUTION: Two-speed versioning — structural migrations log + edge weight time-series append log. Full rewind in <10 seconds.

All Tier 1 All Tier 2 ~Palantir (limited)

04

On-Premise, Air-Gapped Deployment at Reasonable Cost

Bloomberg, LSEG, FactSet, AlphaSense, and RavenPack are all cloud-only. For institutions with data sovereignty requirements — driven by regulation, competitive sensitivity, or security policy — this is disqualifying. Palantir offers on-premise but at $5M–$50M+/year. FinDKG and Ontotext are self-hostable but not purpose-built for investing. The gap: a purpose-built, on-premise relationship intelligence system at institutional but accessible pricing.

CURRENT STATE: Cloud-only (incumbents) or cloud-only (AI platforms). On-prem only at Palantir's price point ($5M+).

MKG SOLUTION: Designed on-premise from day one. Full stack runs within the institution's own infrastructure. No data sovereignty compromise.

Bloomberg AlphaSense RavenPack ~Palantir ($5M+ only)

05

Full Signal Explainability — Source to Output

In a post-MiFID II world, institutional decision-makers cannot act on unexplained signals. AlphaSense provides document citations. Bloomberg provides headlines. But no platform delivers the complete chain for any given output: this signal scored NVDA at −73 because edge E1 (supply_chain, w=0.91) connects TSMC → NVDA, which was triggered by document D123 (published 09:31 UTC), which caused a weight delta of +0.23 via model v2.3.1 — click each element to see its source. Without this, compliance teams cannot audit, and PMs cannot trust.

CURRENT STATE: Document citations at best. Black-box scores at worst. No complete causal chain from signal to source document.

MKG SOLUTION: Signal tracer — every output links back through: edges → weight deltas → news events → source documents. Fully clickable in dashboard.

All quantitative platforms ~AlphaSense (doc-level only)

06

Autonomous Multilingual Scraping Agent for Global Press

Bloomberg and LSEG have multilingual news but it is curated, expensive, and locked behind their proprietary interfaces. AlphaSense is predominantly English. RavenPack covers 13 languages but via licensed vendor feeds, not autonomous scraping. No platform autonomously and continuously scrapes, translates, and structures news from global regional newspapers (Nikkei, Caixin, Le Monde, Frankfurter Allgemeine, El País) into a proprietary knowledge graph in real time. This proprietary corpus is itself a data moat — competitors cannot replicate it without the same time investment.

CURRENT STATE: Expensive licensed news feeds (Bloomberg, Reuters) OR English-only coverage (most AI platforms).

MKG SOLUTION: Hybrid scraping agent — continuous for breaking news, scheduled for regional press. 6+ languages. On-prem translation. Growing proprietary corpus.

AlphaSense FactSet ~RavenPack (licensed, not scraped)

07

Purpose-Built for Alpha Generation — Not Compliance or Search

The closest graph systems (Capital IQ networks, Interos, Ontotext) are built for compliance, AML, and sanctions screening. The closest signal systems (AlphaSense, RavenPack) are built around document search and sentiment scoring. There is no system built from the ground up with alpha generation as its singular objective — with every design decision (output schema, backtest gate, portfolio integration, multi-horizon architecture) serving that purpose. This is the meta-gap: not a missing feature, but a missing product category.

CURRENT STATE: Graph tools built for compliance. Signal tools built for research. Alpha generation is a secondary use case of tools built for something else.

MKG SOLUTION: Every design decision serves alpha generation. The product exists for this purpose. It is not a repurposed compliance tool.

Capital IQ (compliance) Interos (operations) ~RavenPack (closest, but no graph)

---

07 RECENT COMPETITIVE EVENTS — THE MARKET IS MOVING

The competitive landscape is not static. Major moves in the last 18 months signal that the market is converging toward more sophisticated intelligence — accelerating

⚠ COMPETITIVE THREAT SIGNAL

AlphaSense's trajectory ($8.6M → $500M ARR in 6 years) and RavenPack's agentic AI pivot show that the market is moving toward more sophisticated, automated intelligence. Both companies have the engineering resources and

both the opportunity and the competitive pressure for MKG.

JUL 2024
AlphaSense acquires Tegus for $930M — the largest acquisition in market intelligence history. 240,000+ expert call transcripts now proprietary.

JUN 2024
AlphaSense raises $650M Series F at $4B valuation. Viking Global, JP Morgan Asset Management, Goldman Sachs. IPO track confirmed.

JUL 2024
RavenPack raises $20M and launches Bigdata.com — agentic AI platform for institutional financial research. FT partnership follows Dec 2025.

OCT 2024
Interos raises $45.6M Series D, achieving $1B valuation. Supply chain graph intelligence is investor-validated at scale.

OCT 2024
RavenPack launches Bigdata.com. Agentic AI for financial research — the market's first agentic intelligence platform for institutional investors.

JAN 2025
Bloomberg raises 2025 prices by 6.5% — multi-terminal now $28,320/yr, single terminal $31,980/yr. Lock-in continues to compound.

DEC 2025
RavenPack secures FT Ventures investment and content licensing deal — FT's first GenAI distribution partnership. Premium content moat deepens.

OCT 2025
AlphaSense surpasses $500M ARR, 6,500 customers, opens new HQ at Hudson Yards for 2026. Pre-IPO preparations underway.

customer relationships to add graph features. MKG must build and protect its graph IP before this window narrows.

✓ VALIDATION SIGNAL

Interos achieving $1B valuation for supply chain graph intelligence — the same architectural concept applied to a different domain — validates that graph-based relationship intelligence is investable, scalable, and has institutional buyers willing to pay enterprise prices. The market has proved this concept works. MKG applies it to the right domain: investing.

THE CONSOLIDATION PATTERN

AlphaSense has acquired Stream (2021), Sentieo (2022), and Tegus (2024). The market is consolidating around content moats. Any platform that builds a large proprietary corpus of structured relationship data becomes an acquisition target. MKG's graph and weight history are potentially the most valuable such corpus if built correctly.

REGULATORY TAILWIND

EU Corporate Sustainability Due Diligence Directive requires multi-tier supply chain risk audits — driving demand for supply chain graph tools. MiFID II explainability requirements make black-box AI signals increasingly problematic for institutional use. Both tailwinds favor MKG's architecture: graph-based, explainable, auditable.

08 STRATEGIC CONCLUSION — WHERE MKG WINS

The market gap is real, *uncontested, and time-sensitive.*

No commercial platform combines dynamic edge weights, neural network weight adjustment, event propagation scoring, temporal graph rewind, on-premise deployment, and full signal explainability. Every competitor covers at most 2–3 of these simultaneously. This is not an incremental gap — it is a missing product category.

The window is open but narrowing. AlphaSense has $1.4B in funding and deep engineering resources. RavenPack has 22 years of news data and momentum from its FT partnership. Either could pivot toward graph-based intelligence if they chose to. The question is not whether the gap will eventually be filled — it is whether MKG fills it first and builds defensible moats before that happens.

"The market prices individual entity news quickly. It prices relationship-driven second and third-order effects slowly. That lag is the alpha opportunity — and it is currently invisible without a relationship graph."
